

IN THE SPECIFICATION:

On page 8, please amend the following paragraph beginning on line 12:

In a first step in the method of figure 1, samples are taken at the mobile station from the impulse response with a sampling rate of two samples per chip. Obviously, a sampling rate of more than two samples per chip could be used as well. In this case, however, the equations presented in the following would have to be adjusted accordingly. The steps shown in the flowchart are to be understood as corresponding to means or components for carrying out the method.
